FULL STACK DEVELOPER

With overall 3 years as a Full Stack Software Developer specializing in **Ruby On Rails** and **ReactJS**, I excel in developing scalable web applications, optimizing databases, solving complex technical challenges, and delivering high-quality, efficient solutions.

EXPERIENCE

Shriffle Technologies Pvt. Ltd.

Aug 2024 – Present

Software Engineer

- Building and maintaining scalable software solutions, adding new features, and optimizing existing ones to improve performance and user experience.
- Debugging and enhancing systems to ensure smooth and reliable application functionality.
- Collaborating with teams to deliver high-quality software aligned with business and user needs.

Gems Essence Infotech Pvt. Ltd.

Dec 2021 – Aug 2024

Software Engineer

- Contributed to both monolithic and microservices projects by developing features, fixing critical bugs, and enhancing application performance.
- Achieved a 50% reduction in API response times by optimizing database queries and implementing advanced techniques like materialized views.
- Seamlessly integrated a variety of public and private APIs to extend application capabilities.

PROJECTS

Vibranium | Ruby On Rails, ReactJS, GraphQL, Rest API, PostgreSQL

- Designed and implemented over Materialized Views in PostgreSQL, resulting in up to 50% faster query performance and significantly improving data retrieval efficiency for large datasets.
- Optimized database design and indexes in PostgreSQL database, resulting in 60 times better query performance.
- Architected, developed, and scaled multiple core components from scratch, enhancing system reliability and performance, and worked on various microservices for improved functionality and scalability.
- Migrated Ruby ERB pages and REST APIs to ReactJS and GraphQL, enhancing frontend interactivity and improving data fetching efficiency.

FC Admin | Ruby On Rails, Public Apis, Redis, PostgreSQL

- Developed and implemented Restful Apis for efficient data retrieval, storage, and sharing across multiple applications.
- Integrated Redis cache to optimize data access speed and ensure real-time data availability for external systems.
- Designed and built intuitive admin panels, enabling seamless data management and configuration within the application.
- Ensured high performance and scalability in data operations, improving overall system responsiveness and reliability.

HRMS | Ruby On Rails, PostgreSQL, Google location Apis

- Developed and maintained HRMS modules, including employee management, payroll, and attendance tracking, streamlining HR operations by 30%.
- Optimized database queries and processes, enhancing system performance and reducing response times for HR tasks by 40%.
- Conducted thorough testing and debugging, ensuring a 90% reliability rate in handling employee data across the HRMS system.

TECHNICAL SKILLS

Languages: Ruby, Javascript, SQL

Frameworks/Tools: Ruby on Rails, React.js, Redux, GraphQL, Sidekiq, Rspec, AWS, S3

Databases:: PostgreSQL, Redis

Others:: Git
